

"Why DOA Monitoring Should Be Multi-Parameter? What's the Best Choice"

P. Pandin

The Accuracy of the Depth Of Anesthesia monitoring is one of the most popular concerns in the anesthesiology field of interest, today. The presentation would like, first, to make the point about the different physiological parameters to be monitored and , second, based on that to propose the most logical combination of those ones to try to define what could be the best "anesthesiological control panel" in the future.
